1.Introduction

Legal Case Book for advocate is the one of the books that is helpful for the Advocates.it is collection of significant court rules and legal resources, it includes some of the real-life cases that the advocate would take.

It consists of legal cases, legal case is the one of the situations where people, companies, or governments disagree about something, and they ask a court to decide who's right.

Types of Legal Cases

1.Civil cases: -It is type of disagreement between two or more parties searching to resolve the non-criminal matter is called as civil cases

Importance of civil cases in the society

1.Safeguard the Individual rights:
Civil court plays important role in protecting the rights of individual as well as businesses. People can clam legal rights such as property, privacy and freedom etc.it guarantees that people can obtain remedies when these rights get disrespect.

2.Resolve Private Disagreements:
Civil cases handle the dispute between individuals, families or institution such as contractual dispute, Land dispute, Marital dispute, legal dispute, unresolved dispute. These cases can provide the structured and legal remedy without turning to aggression and retaliation.

3.Provide Remedies and Compensation:
Courts can provide financial compensation, issue legal restraints or other performance order this will help to restore balance and justice when somebody suffer from problem due to other actions.

4.Shape Legal Principle and Precedents:
Landmark civil cases often influence broader legal understanding for example in India:

- Kesavananda Bharati V/S State of Kerala (1973)A religious reformer, Swami Kesavananda Bharati did not want to give his land to the government so that he went to the court and said that the government was changing the rules of the constitution very much. The Supreme Court said that only the parliament can change the rules of Constitution but not the basic ideas like Democracy, freedom and justice etc.

- Maneka Gandi V/S Union of India (1978)
  Maneka Gandi's passport was taken away by the Indian Government without revealing her. Because of this reason she went to the court and she said this is inequitable, The supreme court agreed for this and said Everyone has the right to life and personal freedom and the government should follow the same rules for everyone.

  This case is made under the Article 21 declaring the laws must be fair and reasonable.
  5.Support Economic Operation:
  Civil law safeguard business interests, implement contracts, enforces disagreements, and fixes commercial disagreements. This legal certainty support investment and economic growth
  If one party breaks a contract, the other can sure for harm or specific performance. This develops the believe in commercial deal and increase the investments.

  Branches of Civil Law

- Contract law – agreements between the two or more parties.
- Property law – deals with the transfer of properties.
- Family law – deals with the relationships.
- Tort law – deals with unlawful action.
- Corporate law - delas with the operation of corporative and businesses.
- Administrative Law – govern the activity of public authorities.

2.Criminal cases

- Criminal cases are the type of case that happens when somebody is breaking the law, like stealing, hurting someone or doing something illegal.

- Here the police investigate and collect proof about the case and then government lawyer takes the case to the court.

- there the defendant person gets a chance to say what they done. A judge listens to both sides and takes a judgement.

- If he/she is the blameworthy then that person gets punishment like jail, fine or something else.

Types of crimes

1.Minor Crimes (petty crime):

These crimes are not critical usually have less punishments like fines or a short imprisonment.

Some of the Minor Crimes are as follows:

- Retail theft: Stealing a goods from the store without paying from them.

- Over-speeding: Driving above the legal speed limit on the road.

- Unlawful disposal: Throwing the waste on the open area.

- Illegal entry: Entering someone's else property with there permission.

- Public nuisance: making too much noise in the public place.

2.Serious Crime (Felonies)

These are the harmful crimes with more punishments like long term imprisonment time.

Some of the Serious Crimes are as follows

- **Murder:** Unlawful killing a person with some reason.

- **Robbery:** Stealing the property from the other person with force.
- **Abduction**: Unlawful taking of someone away without their will.
- **Sexual assault**: Forcing someone into sexual contact without consent.
- **Drug distribution:** The act of selling illegal drugs.

3.White-collar Crimes

These are the non-violent and financially motivated crime usually involving money or business.

Some of the Crime which come under this crime are as follows:

- **Fraud**: intentionally Lying to get money
- **Corruption**: receiving money to get wrongful help.
- **Embezzlement**: misappropriation of money from own company.
- **Cyber-crime**: illegal action of stealing the online data.

4.Juvenile Crimes

It is the one of the act committed by the children and teenagers .it is handled by the juvenile courts rather then the criminal courts.

3.Constitutional Cases

It is the legal case that questioning about meaning and application of the Indian constitution**.** It involves the induvial rights and power of governments or limits of governmental authority.

Constitutional cases matter because

- They guard people's rights.
- They maintain the government.
- They help to define the real meaning of constitution.

Examples for landmark Constitutional cases

1.Indira Nehru Gandhi v/s Raj Narain (1975)

Raj Narain, he a political opponent, offend the Prime Minister Indira Gandi of using biased meaning during her election. Because of this reason the Allahabad High Court found her guilty and ineligible her from holding office. she contested this in the supreme Court. The Outcome from this is the supreme court intimate that even the parliament cannot change the basic structure of the Constitution of India.

4.Administrative Cases

It is legal case that deals with regulations made by the government and public corporative or several administrative bodies such as public authorities, agencies, commissions and boards.

These cases help the government to act legally. Common example for these cases is A government employee is get suspended from his/her job without proper reason.

Administrative cases Matters because

- They save people from improper use of power.
- They make sure government decisions are Lawful and appropriate.

2.Literature Survey

2.1 Existing System

- Manual Case Management Systems

  Historically legal professionals maintain case information and client details in the manuals or spreadsheets. However this method is drawn out, and it tends to data loss it fails to have security and lacks of handling the multiple cases concurrently.

- Existing Digital Legal Management Systems

  There are number of digital tools obtainable in the internet for managing the legal case records for advocates such as My Case. These Systems provide cloud-based case management, document achieving. Many of the software's are membership based and costly for single advocates

2.2 Problems in existing System

Problem Statement

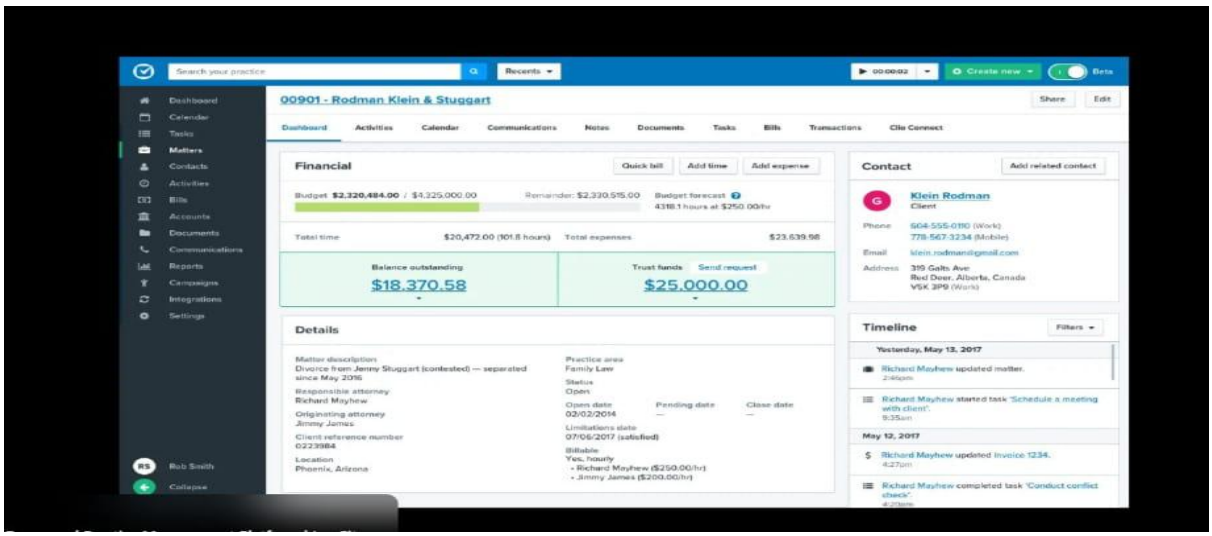

In the existing system, most of the advocates manage their case file, client details and court dates manually using paper files, notebooks and spreadsheets. Approach makes it challenging to arrange, observe and regain information becomes a major challenge. There is no all in one platform to keep data safely

Disadvantages of the Existing System are as follows:

- **Long winded:** Manual entry and looking for case information take a lot of time.
- **Error prone:** error is occurred due to manual entry and documentation.
- **Data integrity risk:** Physical documents can be forgotten or lost.
- **Difficult to fetch details:** Exploring for old cases or client details is slow and wasteful.
- **No Data security:** Paper files and original record can be consulted or mismanaged easily without proper security measures.

2.3 Available solution and their solution

1.Clio

It is the cloud based legal software practice tool and it is the cloud based so that it can be used globally. It cannot downloadable in the Desktop and laptops but here we can access theses software by the brewers. It is not a free software pricing starts around $39-$69 USD per month. It is one of the expensive and more powerful application.

Features

- Case tracking
- Document management
- Billing
- Client portal

Clio has disadvantages.

- **Price**: -Small firms and solo practitioners may find Clio's subscription pricing model to be too high for their budgets.

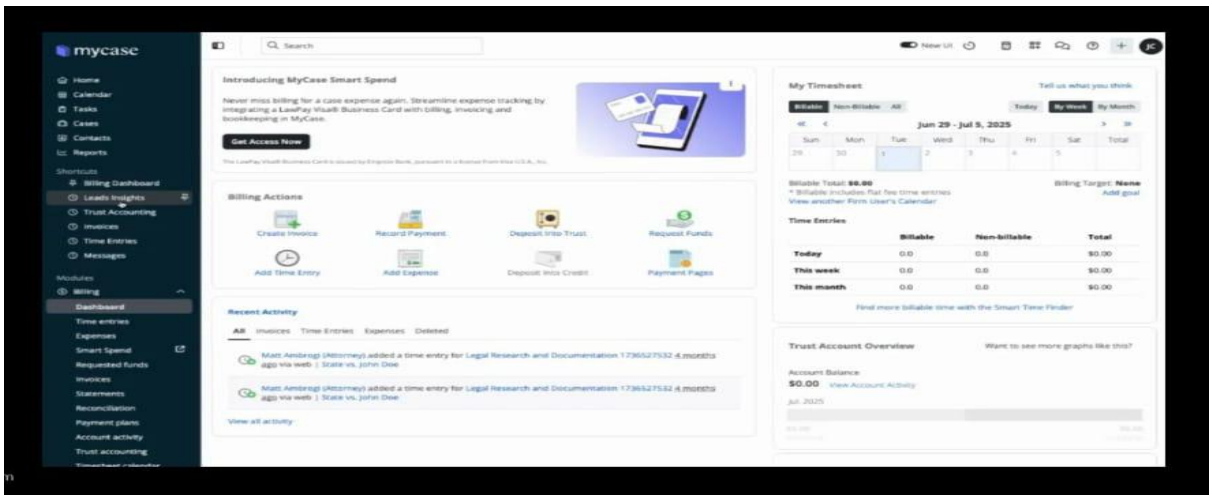

- **Limited Customization: -**Many users of Clio have complained about the limitations of the flexibility of Clio when it comes to customizing their workflow, forms, or fields to meet the very specific needs of their practice. Clio states that the way in which it categorizes documents lacks a great deal of power, and users may have difficulty sorting or categorizing their documents in ways that are customized to their needs.

- **Steep Learning Curve / Complexity: -**Many of Clio's features are complicated for new users, which may result in frustration and confusion when trying to learn how to set up and use the software effectively. As many of the more advanced features of Clio (reporting and document automation) can be complicated, it may take a significant amount of time to learn how to use those features of Clio effectively.

- **Reliance on Internet (and Limited Offline Access): -**Clio is a cloud-based application, meaning a stable internet connection is essential to its full functionality. Users who rely on working offline or accessing their application during an outage may experience difficulties due to Clio's reliance on having a stable internet connection.

- **Document Management / Linking: -**As stated in Clio's own guide, choosing a Practice Management System, there is no way to "link" documents in a manner that would allow a user to view a complaint and summons as separate, but related, documents.

2.My Case

It is one of the legal software, cloud based which can be access through browser and we can install it in our mobile phones. In this user can log in via web and the data is stored in the My Case servers. It is free for Clients to use it but partly free for the lawyers. It is a marketplace but not full practice management software.

Features

- Case tracking
- Communication

- Billing
- Calendar

Drawbacks of MyCase

- **Lack of Customization:-**Users frequently find that My Case's workflow is too strict (and therefore hard) to customize toward their unique (or specialized) firm methods. Only limited customization options on custom fields and templates: e.g.. when automating documents, there might not be any way to combine contacts (data entry) from multiple parties into a single matter. There are also many billing or invoice template limitations regarding the level of customization you can do.

- **Mobile App Restrictions:-**My Case mobile offers less functionality when compared to their desktop/browser version. For lawyers that rely heavily on their mobile phones for work, this could present a challenge because they may feel limited or inefficient.

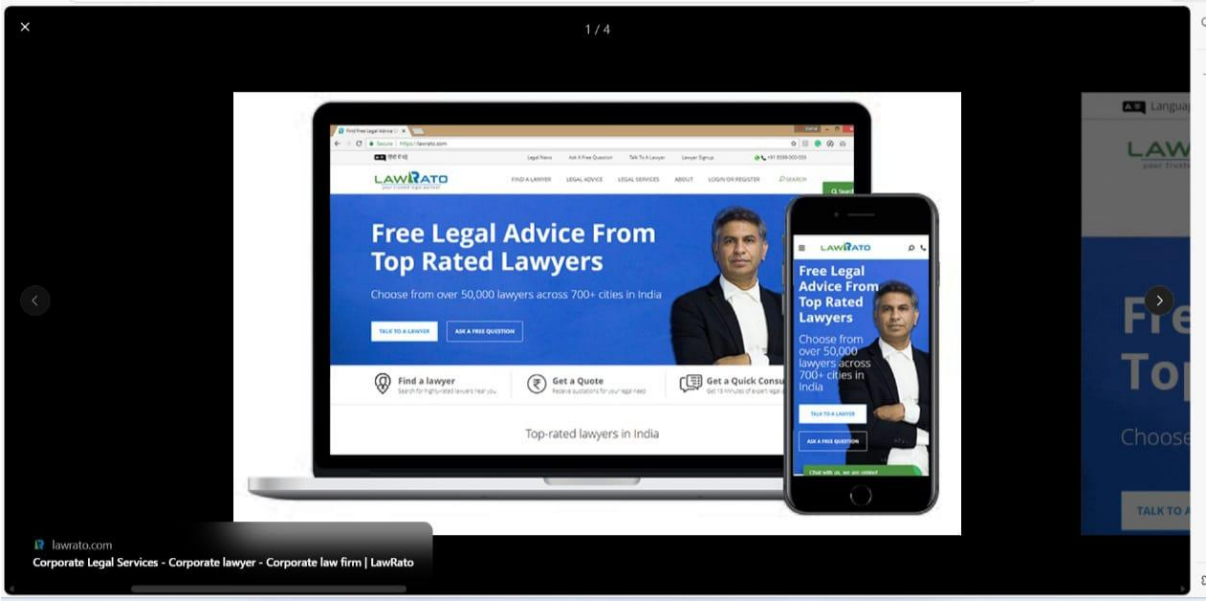

- **Integration Problems / Limited Integration:-**Limited integrations with some other vital tools, such as accounting software packages (QuickBooks, etc.) are available with MyCase; some users also cite a lack of compatibility with specific niche software applications.

- SelectHub:-QuickBooks (for accounting) integration is especially problematic; in particular, some users have noted that it can be difficult to configure the integration set up correctly or properly handle trust account flows.

- LegalTypist:-Several past evaluations have reported that the one-time set-up charges for QuickBooks integration can be significant.

- **Document Management / Automation:-**Bulk document creation/editing/management is significantly weaker with MyCase vs. many of its competing systems.

3.LawRato (India)

It is an online legal tech platform. It is the not law firm. It provides access to the advocates and legal services via its network. It is free for the clients and partly for lawyers.it is not full practice management software.

Features

- Lawyer-client communication
- Case Listings

Disadvantages

- **Lawyer Quality and Vetting**:-In a marketplace like this, you'll find a staggering range of lawyers listed with varying degrees of expertise, experience and quality; there is no consistent criterion by which to vet these lawyers.You may also discover that some lawyers' profiles may not have undergone as much vetting as their clients might expect. As such, clients are prone to selecting an applicant whose qualifications may ultimately be lower than what they initially thought.

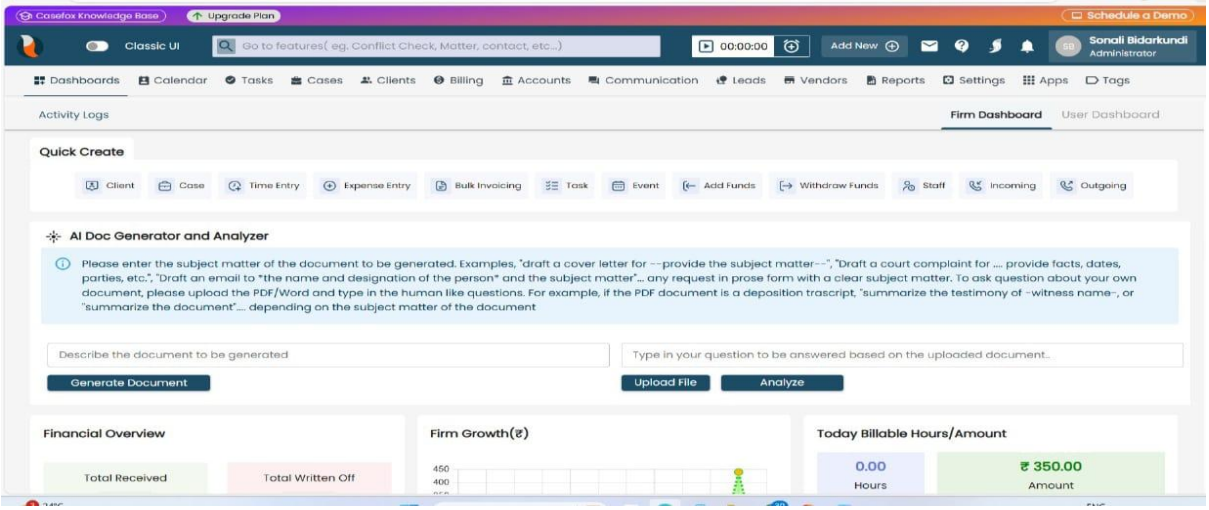

- **LegalTechGuide:-**As with many other marketplace models, there can be a tendency towards quantity over quality in terms of the number of lawyers that have signed up to participate in this marketplace; therefore, it can be difficult for prospective clients to differentiate parties meaningfully.

- **A Lack of Interpersonal Contact:-**Online platforms have decreased the amount of in-person contact between lawyers and their clients; this limits the ability of lawyers and clients to build relationships and the level of trust that forms as a result of such relationship building.

  Certain types of complex and emotional matters often benefit from an in-person consultation, such as those involving personal trauma, or detailed fact-finding, which may be more difficult to accomplish effectively through an online or over-the-phone meeting than through an actual in-person meeting.

- **Regulations & Ethics:-**Legal-tech platforms often face regulatory challenges in navigating the very complex rules that govern the practice of law, as well as the licensing and ethical obligations that lawyers must adhere to in order to be licensed as a lawyer in their respective states.

4.CaseFox

It is affordable cloud based legal case management software. It is free for limited users Up to 4 cases and 2 clients for free.

Features

- Client portal
- Case updates
- Document storage

Disadvantages

- **Customization Limits:-**There are several areas where CaseFox has restrictions on the ability to customize invoice templates; this can create difficulties when it comes to creating an invoice that is tailored to the specific needs of your client.The Legal Practice also states that there are restrictions on customizing workflows used by your firm.

- **Does Not Offer Offline Support:-**According to the user experience reports, there is no offline mode for time tracking features, so having a dependable internet connection is critical for using many of the features.

- **Basic Document Management Capabilities:-**Basic document management capabilities include weak tagging and poor categorization, versioning and search capability**.** Some users on Capterra feel that the document management system isn't as effective at organizing/categorizing case files compared to other document management systems, which limits their ability to locate files quickly.

5.Legal Files

It is the enterprise legal management software. It is paid software and it is not for public.it is only designed for corporations and government agencies.

Features

- Case management
- Document control
- Client-specific access

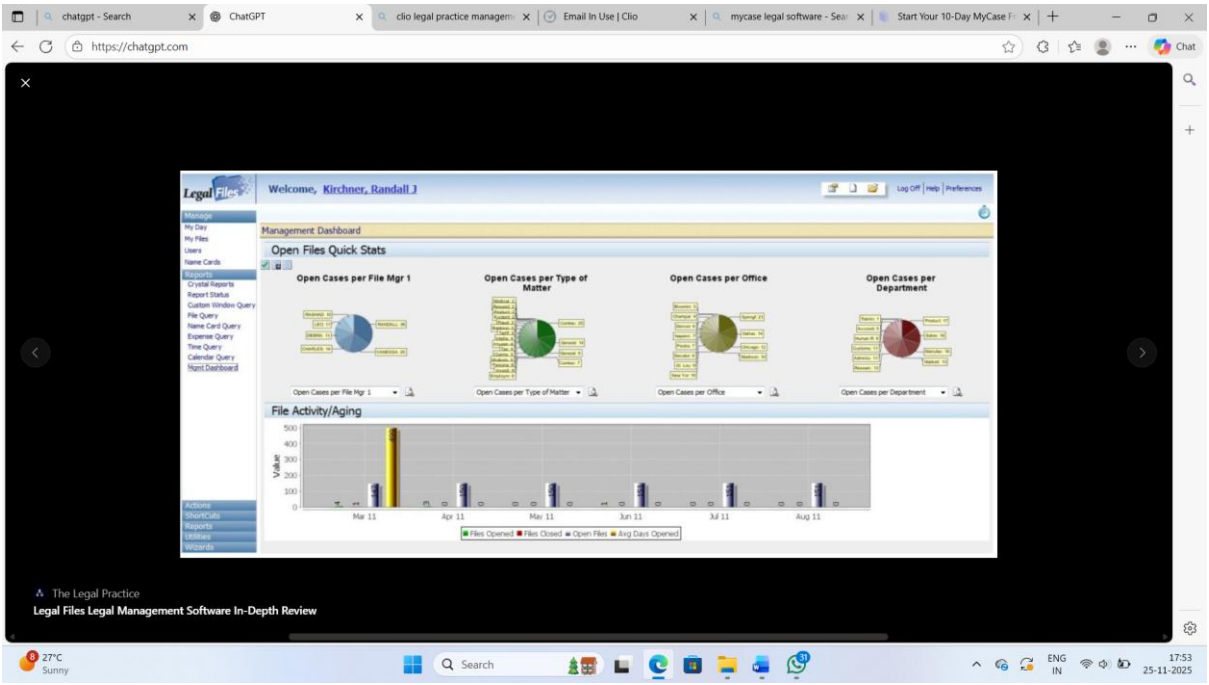

Disadvantages:-

- **Licensing Costs / Licensing Overhead:-**The initial setup and maintenance of a Legal Files (i.e., the cost to license) are due to the maturity and power of the system. These costs may be prohibitive to many small firms/departments. The amount of cost to set up and deploy (i.e., customization, user training, server, or other infrastructure) that a small organization may incur could be significant.

- **Complexity & Learning Curve :-**Because Legal Files has many features, it can be very difficult for users to navigate through all its capabilities. This can create some challenges for users who have not been trained on a case management tool or for those that use more "basic" tools for case management.

- **Restrictions on Customization / Rigid Structure :-**The software may not be as flexible as some users need to post records in some "matter types" (for example, if your firm has two major practice group categories with significantly different data - litigation vs transactional). As such, it could require significant custom development to make legal files work for all. To create the type of data needed to support all practice groups, a non-technical user needs to develop a custom screen or custom fields (to retain the integrity of the records) for use within legal files.

- **Difficulties in Conflict Checking:-** The issues with how legal files treats "matter-centric" data leads to an inability to perform firm-wide conflict checks. Therefore, we have learned that some firms will buy third-party conflict check add-on solutions because legal files' built-in conflict check tools are not able to meet the needs of many users.

2.4 Proposed System

Problem Definition

The existing Manual system is managing the legal case documents manually it will create the problem of data loss as well as security problem and suspectable for human error. Advocate usually struggle to Arrange huge amount of data, record case progress, maintain hearing date's and ensure data security. There is no integrated digital client information and document repository.

Therefore, there is need for digital Legal Case Management System that allows advocate to Archive, Organize and access all case related documents safely and securely. The system should Digitized task like manage the records, setting the hearing date and send the notifications to improve the productivity, speed and accessibility in legal practice.

Proposed Solution

Advocate Legal Case Book its goal is to refine the process of managing legal case details for advocate The System switches the traditional manual record-keeping with Trusted online platform.

The application will allow advocates to:

- Uphold detailed records of every case, clients and court hearing data in the database.
- The advocate can easily explore, adjust and get case information using client names, case numbers and hearing dates.
- Fixing a hearing data get automatic reminders and alerts.
- Preserve important documents and evidence securely in digital format.
- Create quick summary, case histories and reports for quick reference.

2.5 Advantages of proposed solution

1.Digital Case Management

Reduce manual paper work keeping all cases details, client details and documents in a secure digital format.

2.Easy Retrieval

Advocates can quickly fetch the case details and documents anywhere at any time.

3.Improved efficiency

Automates repetitive tasks like scheduling hearing, generating case and tracking case progress saves the time.

4.Secure date storage

Assure client confidentiality and data protection through secure login and database protection.

5.Client communication

It confirms lawyers to easily update clients about case progress, next hearing dates etc.

3.Problem Definition

3.1 Problem definition

The existing Manual system is managing the legal case documents manually it will create the problem of data loss as well as security problem and suspectable for human error. Advocate usually struggle to Arrange huge amount of data, record case progress, maintain hearing date's and ensure data security. There is no integrated digital client information and document repository.

Therefore, there is need for digital Legal Case Management System that allows advocate to Archive, Organize and access all case related documents safely and securely. The system should Digitized task like manage the records, setting the hearing date and send the notifications to improve the productivity, speed and accessibility in legal practice.

3.2 Proposed Solution

Advocate Legal Case Book its goal is to refine the process of managing legal case details for advocate The System switches the traditional manual record-keeping with Trusted online platform.

The application will allow advocates to:

- Uphold detailed records of every case, clients and court hearing data in the database.
- The advocate can easily explore, adjust and get case information using client names, case numbers and hearing dates.
- Fixing a hearing data get automatic reminders and alerts.
- Preserve important documents and evidence securely in digital format.
- Create quick summary, case histories and reports for quick reference.

3.3 Development process

The Development process used in this application is the evolutionary and iterative approach which is used to improve, the faster incremental to the existing system.

The software involves the following modules.

Module 1: User Management

The User Management Module is the foundation of this software solution. It ensures that only verified and trusted users can access the platform. Data privacy and confidentiality are key in the development of legal-tech software, as this type of software handles a lot of very sensitive data, including client information, case documents, payment information and communication logs. As a result, a reliable user-authentication process is required.

This user management module provides functionality to establish user accounts and authenticate users, provide authorization and establish access controls. The administrator, normally the advocate or owner of the system, can create multiple user accounts, with each account assigned a unique username and password. The system provides mechanisms for role-based access control (RBAC), allowing users to have access only to functions associated with their user role.

Module 2: Staff Management

The Staff Management Module allows the advocate to add, update, and manage staff members who assist in legal operations. Staff may include junior advocates, clerks, assistants, paralegals, typists, or administrative personnel. Their productivity and task management are essential because legal workflows often involve multiple steps such as drafting documents, preparing case files, communicating with clients, collecting information, or attending hearings.

The advocate can create staff profiles by adding staff name, designation, contact details, and assigned job responsibilities. Once added, the advocate can assign tasks to each staff member. These tasks may include preparing case summaries, contacting clients for documents, updating case files, or attending field visits. Each task contains essential information such as start date, end date, priority level, status, and specific instructions.

Module 3: Client Management

The Client Management Module is one of the most crucial components of the software. Advocates maintain relationships with multiple clients, and keeping their information organized is essential for effective legal practice. This module enables the advocate to add

new clients, view existing client details, update or edit client profiles, and delete outdated or inactive clients.

A client profile typically includes name, address, contact number, email, case type, identification documents, and any additional notes. It may also include professional background, opposing parties, emergency contacts, and client categorization (new, existing, lead, corporate client, etc.).

Module 4: Case Management and payment gateway integration

It provides options to Add case, View Case, Update Case, Delete Case, Case History, online payment, payment record, payment history.

The Case Management Module is a central part of this software system. It enables advocates to organize and track all activities related to individual cases in a systematic way. For example, the Case Management Module lets an advocate add a case, view the details of the case, update the status of the case, delete closed or incorrect cases, and keep a complete history of the case.

To add a case, the advocate will enter case numbers, court names, and all other relevant information, such as who filed the case and who is opposing it. The Case Management Module keeps all of the necessary information that the advocate will need to use during hearings, client meetings, or preparing documents.

One of the most useful features of the Case Management Module is the ability to maintain a complete history of all updates made to a particular case. This includes a listing of all hearing dates, submitted documents, received documents, and any other relevant information related to the case. The case history helps the advocate keep track of all the actions taken on a particular case. The case history is presented in chronological order, making it easy to see all of the events that have occurred and all of the updates that have been completed, enabling the advocate to stay on top of the progress being made on a particular case.

Module 5: Hearing and Schedule Managements

It Adds Hearing Date, Notification, Calendar view

The Legal Hearing & Schedule Management Tool (HSMT) is extremely important because it provides advocates with the ability to set the appointment and all details associated with the hearing date. The HSMT allows advocates to manage all of the details necessary to prepare for the hearing, including:

- Creating and setting up a hearing date
- Adding the courtroom information and location
- Sending email notifications to the advocate and the client about the scheduled date and time of the hearing
- Tracking changes to the hearing date and time

The HSMT can send SMS, email, or in-app notifications to the advocate (and potentially the client) about the appointment.

Module 6: Document Management and report generation

It allows to Upload Document, View Document, Delete Document, print report

Legal practice involves extensive documentation: petitions, affidavits, evidence, client agreements, notices, court orders, judgments, client statements, and more. The Document Management Module ensures proper organization, storage, and accessibility of all these documents.Users can upload documents in various formats such as PDF, DOC, JPEG, or scanned images. Each document is linked to the respective case and client. The system may allow tagging, categorizing, and describing documents for easy retrieval. Advocates can also view documents online, download them, or update them when new versions become available.

4.Software requirement specification

4.1 Purpose

The purpose of creating an advocate legal case book is to create an productive and organized digital platform that helps advocates to manage their legal cases, clients and their documents. In the traditional legal system, advocate uphold large volumes of paper files which leads to difficulty in storing, updating and retrieving case details when they want.
This manual process takes more time and also leads to the human errors and lacks of security for the data. Hence the Advocate Legal Case Book software is having a goal to overcome this like problems and it provide smarter way to handle legal information. The main objective is to create this software is to enable advocates to store all needed details of their case which involves client info, case history, court details, hearing dates and case status in a single System.

Scope

The Advocate Legal Case Book project has a wide scope in Converting the traditional methods of legal case management into a capable, digital and automated process. It is created to offer as a complete solution for advocates and law firms. The scope of the project covers the development, implementation and future enhancement of a software application. In the traditional system, advocates deal with multiple cases and clients manually using the paper files or documents. This leads to some human errors and lack of security to avoid these kinds of problems the Advocate Legal Case Book software is required. By using this software, the advocate can be maintaining the details of the cases and clients very well. This can help the advocate to use the software anywhere and anytime.

4.2 Product Overview

The Advocate Legal Case Book is the digital case management software developed to help advocates, law office, and legal professionals in collecting and managing their daily legal tasks. It act as a complete digital platform that substitute the traditional manual record keeping system. The product is designed to reduce the complex work which are involved in the preserving case files, following hearing dates, managing all the information of the clients.
And store the legal files safely and systematically.

4.3 Functional requirement

The functional requirements tell the core components or operations that the advocates Legal Case Book must perform.

Module 1: User Management

It ensures only permits the trusted user access the system

Submodules:

Login, Register, Profile Setting, Logout

Module 2: Client Management

Submodules:

Add clients, View Client, Edit/Delete:

Module 3: Case Management and payment gateway integration

Submodules:

Add case, View Case, Update Case, Delete Case, Case History, online payment, payment record, payment history.

Module 4: Hearing and Schedule Managements

Submodules:

Add Hearing Date, Notification, Calendar view

Module 5: Document Management and report generation

Submodules:

Upload Document, View Document, Delete Document, print report

4.4 Performance requirement

The design of the system will ensure that it can deliver optimal performance and responsiveness during both "normal" usage conditions and times of "peak" usage. Simultaneous access should be provided to at least 500 users without perceivable performance degradation; this means that multiple advocates, staff members and clients can concurrently access and use the platform without delay. Additionally, the average page load

time should be less than three seconds for typical usage scenarios to allow for a smooth and efficient user experience. Document management operations should be optimized for efficient and reliable upload/download of documents; the system should be able to handle the upload/download of large files (up to 100MB) quickly and reliably. Payment gateway transactions must also process within five seconds in order to allow for timely/efficient financial transactions between clients and advocates. Notifications of hearings, deadlines and other important information should also be sent out as quickly as possible (within one minute) so that each user has the opportunity to receive the information at the same time and can take action on the information without any delays. All of the above performance requirements will ensure the platform is fast, reliable and efficient even when there is high user activity and/or heavy data activity.

4.5 Exception Handling

Through the use of error handling and exception procedures, the System ensures security, reliability and ease of use. When a user attempts to log in and fails, they receive an understandable error message. If the user has had five unsuccessful login attempts, the user's account will be temporarily suspended for the next 30 minutes until the user logs back on using their email address. If a payment fails, the payment will automatically be rolled back and the user will be notified immediately via email. If a user types in an invalid entry, the system will highlight it for the user and prompt them to try again with the correct entry. If there is a document upload failure, the user will have the ability to retry the upload and the system will log the incident for administrative purposes. If the system goes down for maintenance, the system will display a "system Maintenance" message to the end user and will automatically restore itself as soon as the maintenance work is complete.

4.6 Acceptance criteria

This paper will focus on understanding how Generation Z (Gen Z) is changing their consumer habits and preferences in relation to sustainable fashion over time. Generation Z will be the first generation of consumers who are "digital natives" (people who have grown up with technology, especially the internet) and will have increasing purchasing power and value environmentalism. This report reviews many research articles related to the factors that drive Generation Z toward sustainable purchasing, which include the increasing importance of brand transparency, authenticity, and social responsibility. The report

discusses behavioral discrepancies, such as the "value-action gap," which refers to the differences between Generation Z's pro-sustainability values and behaviors and their actual purchasing behavior, which is often limited by their financial situation and societal pressures to purchase fast fashion products.

4.7 Design hints and guidelines

You should have developed your System to work seamlessly with both the Web and Mobile Devices. Your System should also provide Secure Data Access to Users based on their Role, by implementing a Role Based Access Control (RBAC) System. Cloud Storage is recommended for the flexibility, reliability, and ease of recovering lost data, that it provides. You need to keep detailed Audit Logs of User Activity to ensure that you hold Users accountable for their actions, and to assist in the Troubleshooting of Problems. Database Query Performance should be properly Optimized for Fast and Efficient Retrieval of Data. The User Interface (UI) and User Experience (UX) will be designed to be as Easy to Use as possible by using the Following Guidelines; Navigation will be simple and straightforward, resulting in Minimal Clicks to Perform Key Functions. Payment Integration will be performed using PCI Compliant methods to protect User's Sensitive Payment Information, as stipulated by Payment Processing Regulation Guidelines. Finally, by using a Modular Design to build your System, Future Enhancements can be made to the System without impacting Existing Functionality.

4.8 Technology requirements

- **Frontend**

  React.js
  HTMl5,
  CSS3,
  JavaScript

- **Backend**

  Node.js
  Express.js

- **Database**

  MySQL

- **IDE**

  Visual Studio Code

- **Testing Tool**

  Postman

- **Hardware Requirements**

  Processor – Intel Core i5

  RAM – 8GB

  Hard Disk – 477 GB

- **Software Requirements**

  Operating System – Windows 10

  Frontend Framework – React.js

  Backend Framework – Node.js with Express.js

  Browser – Google chrome/Microsoft Edge
